Room 818, A Block, Galaxy Century Building, No 3069, Caitian Road, Futian, District, Shenzhen, China Tel: 0755-8339 2233 Email: info@eogosound.com

# **Installation Process**

#### Prepare for Installation Tools:

- 1. Level Ruler
- 2. Small Chainsaw
- 3. Batten
- 4. Electric Screwdriver
- 5. Screw
- 6. Wire Stripper
- 7. Multimeter
- 8. Power
- 9. Blade
- 10. PVA wood glue
- 11. Sticky Mesh
- 12. Seam Tape
- 13. Scraper
- 14. Utility Knife

#### Step 1: Draw the Outline

Trace the enclosure to draw the outline on the wall.

EOGO SOUND (Shenzhen) CO., LTD

Invisible Audio 14 years | www.eogosound.com

### Step 2: Make a hole

Follow the outline to make a hole on the wall by cutting tool. We would recommend using a drywall saw or oscillating multi-tool. You'll need a depth of around 55 millimeters for all EOGO speakers.

## Step 3: Install the enclosure

- a) Place the batten into the hole and screw it in.
- b) Push the cable through the tiny round hole in the back of the enclosure and reserve a length of 20cm, use a spirit level when placing the enclosure, making sure to keep the enclosure level with the wall.
- c) Screw the enclosure to the wall.
- d) Test the cable for short circuits by using a multimeter.

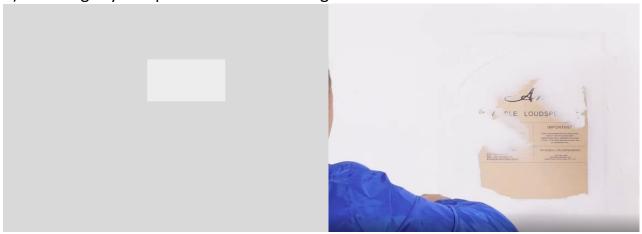

#### Step 4: Install the speaker

- a) Use a stripper to strip the cable back by around 10mm to avoid short circuits. Connect the cable to the terminals of the speaker. Make sure you connect the polarity correctly: the cable's positive side(worlds printed) to the positive terminal of the speaker (the red one), the cable's negative side (no words printed) to the negative terminal (the black one).
- b) Remove the double-side tape on the 4 sides of the enclosure.
- c) Place the speaker into the enclosure.
- d) Screw the speaker to the enclosure.
- e) Use a multimeter to test the other end of the cable to make sure the cable is connected properly.

## Step 5 Brush the Powder

- a) Blend the Powder with water at a ratio of 1:1, add a little white PVA wood glue to strengthen the stickiness.
- b) Use Powder to brush and smooth the 4 sides of the speaker.
- c) Soak the seam tape for 15 minutes before sticking on the 4 sides of 4 sides of the speaker.
- d) Wait for the Powder dry completely, then move on to the next step: 24 hours would be recommended.
- e) Brush the Powder over the whole surface of the speaker.
- f) Use sticky mesh cloth to cover the speaker to avoid the wall cracking.
- g) Wait for 24 hours for the Powder to dry completely.
- h) Sand lightly and paint to match the original color of the wall.

#### **Notice:**

The total thickness of the attached materials on the surface of the speaker (Powder, Seam tape and Sticky mesh) should not exceed 2mm to prevent impacting the sound.
